## Summary

DevOps-oriented Informatics graduate (Universitas Syiah Kuala, GPA 3.77/4.00) who ships production infrastructure as code — built an on-demand platform-engineering pipeline on Azure AKS (Terraform, Docker, ArgoCD GitOps, OIDC CI/CD, Trivy, Prometheus/Grafana) deployed end-to-end through CI/CD and GitOps, showcased at ilhaamghiffari.codes (live demo on request). Ranked Top 20 in the Datathon AI Impact Challenge 2026 (Microsoft Elevate x Dicoding) with a food-price forecasting system (12.38% avg MAPE). Bangkit Academy 2024 ML cohort alumnus; Vice Chair of the Faculty Student Council (DPM FMIPA USK). Seeking a DevOps, Infrastructure, or Security internship at Indonesia’s leading SaaS company.

## Education

## Projects

---

- Golden Path | Platform Engineering Pipeline on Azure AKS** 2026
- Built an end-to-end platform: an Astro site containerized with Docker/nginx, pushed to GHCR, and deployed to Azure AKS purely via GitOps (ArgoCD auto-sync & self-heal) — demo environment provisioned on demand via Terraform to control cloud costs; TLS via cert-manager/Let's Encrypt; showcase at [ilhaamghiffari.codes](https://ilhaamghiffari.codes).
  - Provisioned all infrastructure with Terraform (Azure VNet, AKS, Key Vault, locked remote state); CI/CD with GitHub Actions using OIDC (no static secrets), Trivy container & IaC scans gating every push.
  - Added kube-prometheus-stack monitoring, Blackbox uptime probes, Grafana dashboards-as-code, PSA-restricted pods, and network policies.
- Aceh Resilience Monitor | Food Price Forecasting, Top 20 Datathon** 2026
- Team project (3 members), Datathon AI Impact Challenge 2026 (Microsoft Elevate x Dicoding): analyzed daily staple-food prices across Indonesia (PIHPS 2023–2025) and built Prophet time-series forecasting models (12.38% avg MAPE).
  - Built an automated serverless daily pipeline (Azure Functions & Static Web Apps) for data collection and validation, with tests and architecture docs — [github.com/aceh-resilience-monitor/Aceh-Resilience-Monitor](https://github.com/aceh-resilience-monitor/Aceh-Resilience-Monitor)
- DermaScan | Skin Disease Detection App, Bangkit Capstone** 2024
- Capstone team project (Bangkit Academy 2024, C241-PS084): trained a CNN image-classification model for 8 skin conditions (test accuracy 97%) using TensorFlow.
  - Deployed the model as a cloud API on GCP (Cloud Run, Cloud Build, Storage, SQL) with a Node.js/Hapi backend serving the Kotlin Android app — [github.com/Dermascan-C241-PS084](https://github.com/Dermascan-C241-PS084)

## Certifications

---

- Bangkit Academy 2024 - Machine Learning Path** July 2024
- Google, GoTo, Tokopedia, Traveloka *Credential ID: M322D4KY3003*
- IBM DevOps, Cloud, and Agile Foundations (Specialization)** Aug 2026
- IBM via Coursera *Credential ID: F7ZHUKQIRD6R*

## Achievements

---

- **Top 20, Datathon AI Impact Challenge 2026 (Microsoft Elevate Training Center x Dicoding)**  
Team project **Aceh Resilience Monitor** (with 2 teammates) was selected among the Top 20 Datathon teams out of thousands of proposals across Indonesia, and advanced to the Proposal Implementation & Workshop phase (May – Jun 2026). Built a food-price forecasting system with Prophet time-series models (12.38% avg MAPE) and an automated daily data pipeline.
